AB **Calcium phosphate cements** are provided.

The subject **cements** comprise amorphous **calcium phosphate**, at least one additional **calcium** source, usually an additional **calcium phosphate**, and a liquid component, such as a physiologically acceptable lubricant. Upon combination of the **cement** components, a flowable composition

capable of setting in vivo into a solid **calcium phosphate** mineral product, such as **hydroxyapatite** is produced. The subject **cement** compositions find use in a variety of applications, including the treatment of injured or compromised hard tissue.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB **Calcium phosphate** minerals are formed by using phosphoric acid source substantially free of uncombined water in conjunction with a **calcium** source, normally as any combination of **carbonate**, phosphate and hydroxide, and, as required, any additional base to neutralize the phosphoric acid. Protein may be optionally added. The resulting product is readily formed and then sets to a hard, stable, workable shaped object.
